

## mouse

trusted support  
*everyday*

The MOUSE is a special purpose stroller designed for children who are unable to walk or sit in the correct position as a result of injury or another condition.

With adjustable pads, the backrest can be optimized to the child's needs and will provide the right security. Large wheels (gel-filled or pumped), with shock absorbers of rear as well as front wheels, facilitate comfortable travel on uneven ground.

The stroller offers a high seat comfort thanks to tilt in space and recline (so-called "cradle"), which will help you to put the child in the right position, making sure that the pressure is distributed evenly.

### why MOUSE?

#### 1 Reducer cushion

This insert allows to adjust internal dimension of the seat (depth and width) to maximise comfort and safety of the child.

#### 2 Reversible seat

The construction of the stroller allows to easily rotate the seat opposite to the driving direction.

#### 3 Adjust the backrest to lying position

Thanks to a variety of possible adjustments you can transform a regular stroller into a safe and cosy place for a nap.

#### 4 Foldable frame and removable seat

The construction of main elements of the stroller allows to disassemble it into 2 separate units (frame and seat) – you may easily pack the stroller even into the smallest car trunk.

### a wide range of equipment

FIVE-POINT SAFETY BELTS  
ADJUSTABLE PADS  
REDUCER CUSHION
